Game 1 - What are they?

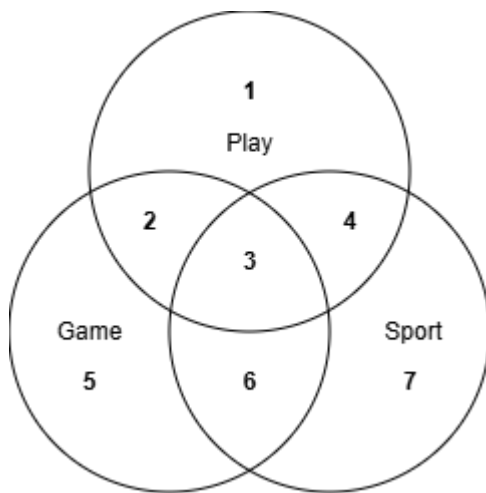

Part 1: Analysis

Philosophers and theorists disagree about how the concepts of *game*, *sport*, and *play* relate to one another. Below are two competing representations. Study each carefully and provide an example for each number of each model or explain why you think it is invalid.

Model A

Model B

Part 2: Reflection

2a. Which model do you prefer, and why?

Argue for your preferred model. Consider: Does one model capture real-world cases better? Does one make cleaner philosophical distinctions? Are there activities your preferred model handles that the other cannot?

2b. What does your preferred model imply about the *defining features* of each concept?

For example: if you prefer Model B (three equal circles), what must be true of "sport" that makes it independent from "game"? What is the essential difference between them?

2c. Challenge case

Pick **one** of your examples from the tables above that you found hardest to place. Explain the difficulty, and say whether that difficulty counts as evidence against one of the models.
